

Dear Prof. and Mrs. Kálmán,

Please accept our sincerest thanks for your valuable and encouraging letters, and we warmly congratulate you for your new success.

The new school term is just beginning and we wish to inform you that we are now conducting a discussing party to study the documents which recently promulgated by the Central Committee of the Communist Party on the Convention of the 8th Plenary Session, thus to enable to understand the aim of our future task, and we are in full determination to carry out the spirits in all of our work.

We have decided to take up the educational work each seperately and we all voluntarily participate a discussion and learning group, the aim of which is to gain more and fundamental knowledge, like the Method of Monte-carlo, Programming, Approximating Calculus etc. To this, we are longing for your kind enlightenment and precious

notion. We will never forget the happy days you spent with us in Shanghai. The contents of your lectures are abundant in value, and your mode of untiring teaching is worthy of everlasting remembrance.

We will endeavour to repay you for your scholastic personality in our work and as well as in our study of scientific subjects.

The tenth anniversary of the establishment of our Government is fastly approaching and preparations are being made by us to celebrate this glorious and gigantic national festival.

With deepest respects and kindest respects to both Mrs. Kálmán and you.

Your pupils.
